

MT-310 GPRS TERMINAL

BROCHURE

January 2010

Properties

- **Two way communications**
- **512 Bytes Buffer**
- **Stand-alone operation**
- **RS232 or RS485 selectable**
- **300 bps – 115200 bps speeds**
- **Embedded Electric Meter Reading**
- **Windows interface**
- **Rugged metal case**
- **Industrial design**
- **9-30 V DC input range**
- **Electrically protected**
- **MODBUS remote configuration**
- **Low cost**

MT-310 is a stand-alone device for connecting devices with serial communications to internet, in a cost effective way.

It eases serial to gprs conversion. Once configured simply with its user-friendly windows interface, operates without the need for supervision. Bridges the gprs communication channel again automatically if the link is broken. Can be reconfigured via its serial port or remotely with MODBUS commands. Reading electric meters is possible using read-out mode of IEC1107 protocol which is carried out by MT-310. High quality TELIT module is in it.

Applications

- Serial to GPRS conversion
- Telemetry / SCADA applications
- Electric meter automation
- Gas and water meter automation
- Remote temperature reading
- Greenhouse automation
- Gas station automation
- GSM base station monitoring
- Remote connection to PLCs.
- SMS applications
